

Dear neighbour,

This letter is to notify you that the Nutrien Allan Potash Mine will be conducting a Helicopter Electromagnetic (“HEM”) program near its surface operations.

When: July 14, 2023 – July 24, 2023

Who: Xcalibur Multiphysics Group on behalf of Nutrien

Through its operating companies of Potash Corporation of Saskatchewan Inc. and Agrium Ltd., Nutrien Ltd. owns and operates six mines in Saskatchewan, including Allan.

As part of our ongoing operations, Nutrien regularly monitors our operating sites and surrounding areas, the HEM program is one way in which Nutrien does this. These monitoring programs are necessary for Nutrien to ensure proper stewardship and care for the land while we safely and responsibly produce potash in Saskatchewan. Nutrien undertakes its monitoring activities in accordance with applicable laws, and as required by the Saskatchewan Government’s Ministry of Environment.

During the time range identified above in this letter, you may notice a helicopter flying 60 meters above the ground with equipment suspended below it via cable. Highly experienced crews will be flying the helicopter and monitoring their surroundings. An example photograph of the helicopter and its attachment is shown below for reference. The attached equipment is the instrument which emits a small electromagnetic signal (radio wave) and then records the response from the ground below. This electromagnetic field is entirely harmless to humans and animals. The survey will not cause any adverse effects to buildings, flora, or fauna.

For more information about Nutrien’s 2023 Environmental, Social, and Governance Report, please refer to <https://www.nutrien.com/sustainability/esg-portal/esg-overview>

If you have any questions, we would be happy to connect with you so please feel free to reach out to land.potash@nutrien.com or call (306) 933-8500.

Regards,

Lisa MacKenzie
